5 plus kits - \$ 50.00 each

20/20 kit as low as
\$50.00 each

"UltraPermaBand Light Cure Orthodontic Band Cement is my favorite product that I have developed. With its amazing strength, 11 mm depth of cure, and 10 second curing, this marvelous band cement has changed my orthodontic practice. Forget about Zinc Phosphate and Glass Ionomer that wash out as well as the enormous time to mix, place, and wait for final set of these out-of-date products. UltraPermaBand is vastly more economical - it saves gigantic amounts of your chairside and staff time resulting in costing pennies per cemented band.

And to encourage your switch to UltraPermaBand, we now offer "Buy 5 kits and get one free." Compared to other brands at \$120 per kit, this alone should help you economize. After all Doctor, it's your money!"

Dr. Lloyd R. Taylor

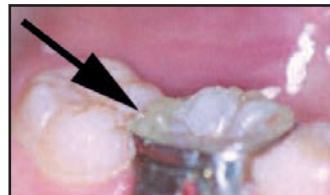

ULTRAPERMBAND TECHNIQUE:

1. **LOAD BAND.** Wax buccal tube and place masking tape on occlusal before beginning to load cement.

2. **BAND LOADED.** Using toothpick, spread cement evenly around inner surface of band.

3. **EXCESS CEMENT.** Seat band, remove tape, and note the excess cement remaining on occlusal surface.

4. **EXCESS REMOVAL.** Using a cotton roll, remove all excess before starting to light cure the cement.

ORIGINAL ULTRA PermaBand - LIGHT CURE - NO-MIX SYRINGE - The Strongest Band Cement

CHECK THESE UNIQUE FEATURES:

- The finest and strongest band cement anywhere.
- Resin is not water soluble; no cement wash out.
- Does not have unpleasant acid cement taste.
- Bright yellow color for easy visibility and clean up.
- Technical instructions included with each kit.
- Virtually unlimited working time; then 45 second light cure.
- Fluoride releasing with outstanding 8 mm depth of cure.
- 35,000 lbs of crushing strength - almost indestructible.
- Bands can be removed with Band Removing Plier or Slitting Plier.
- Etching not required - recommended for maximum bond strength.
